## Large Area Uniform Back Lighting

Microscan's wide range of NERLITE products can illuminate any part or mark for successful machine vision and auto ID applications.

Large Area Backlight illuminators provide sharp contrast to outline a part's shape, find edges and view openings such as drilled holes. High intensity and uniformity are packed into a low-profile industrial package for optimal thermal management. Models for continuous or strobe duty cycles to support static or high speed applications.

### Backlight: At a Glance

- Variety of colors and wavelengths for both continuous and strobed power sources
- High level of uniformity for repeatable results
- M12 connectors for easy connections to drivers or advanced controllers
- Low profile, compact shape for flexible integration
