

Brenton™

Continuous motion improves product stability & reduces energy costs

The BrentonPro Series MACH-3 case packer is all-servo driven and utilizes continuous motion in all sections of the machine for improved product stability; the case never stops moving from erecting to discharging the case.

The MACH-3 minimizes the environmental impact of packaging operations through the appropriate use of electronic and servo drives, resulting in less wasted energy and product and packaging materials.

MACH3

BrentonPro

Case Packer

- Smaller footprint than traditional continuous motion machines to minimize floor space usage.
- Lighter moving mechanisms allow for smaller servo/gearbox combinations to lower up front and operating costs.
- Digital magazine counters assist user-friendly changeovers.
- A single product infeed guide makes it easier to remove bad product.
- On-demand operation follows upstream production rate.

Right: Walk-in design allows easy access into machine for cleaning & maintenance.

Left: Highperformance flighted upstacker incorporates over 15 years of proven technology from our S45 lane divider.
